XWBRW

- Previous phase added uses of \$ZL and \$ZE for UTF-8 read/write over TCP
- \$ZL and \$ZE moved to \$\$BL^%ZOSV and \$\$BE^%ZOSV
- Potential Intersystems Cache Implementations
 - \$\$BL: \$L(\$ZCONVERT(string,"O","UTF8"))
 - \$\$BE: \$E(\$ZCONVERT(string,"O","UTF8"),S,E)

Patient Name Entry

- **Names are different in each culture**
 - This project does not address flexibility
 - Still retaining “surname, given middle” format
- **Allow CJK Names to be entered**
 - Name code wanted UPPERCASE names
 - No case in CJK, Semetic, Brahmnic scripts
 - CJK names are very short
 - Typically 1-2 characters

CJK Name Fixes

- **XLFNAME8, DPTLK2, DPTNAME**
 - Allow entry of name for caseless languages
 - **DPTLK, DPTLK1**
 - Allow one glyph long surname/given
- (took much longer to find these issues!)**

Fileman Data Localization

- **We need a way to localize data that exists in Fileman**
 - Existing DIALOG file framework focuses on routines
 - E.g. Names of CPRS Reports; Menu system

Data Localization Steps

- **Need FM 22.2 with data type patches (originally scheduled for FM 23)**
- **Create DIALOG data type**
- **Change type for field to be translated to DIALOG**
- **Create DIALOG entries**
- **Update data to point to DIALOGs**
- **(optional) Adjust getters to use FM API**

DIALOG Data Type

```
/var/db/foia201805
